

Responsible Investing Manual

INTRODUCTION

This manual explains Pella Funds Management's ('Pella') approach to Responsible Investing ('RI'). Pella identifies RI has having four components to RI: (i) Investment Process; (ii) Returns; (iii) Risk; (iv) Sustainability. All four components must be present to deliver RI outcomes. This manual is divided into four chapters, each one explaining Pella's approach to the four components of RI.

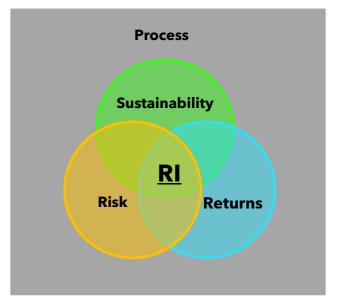

Figure 1 - Pella's Responsible Investing Model

Source - Pella Funds Management

<u>Chapter One - Process</u> explains the four stages of Pella's Investment Process. <u>Idea Generation</u>, involves filtering Pella's investment universe, identifying potential investment candidates within that universe and preliminary research of candidates to determine which to pursue. This stage is followed with <u>Due Diligence</u>, in which the best candidates are deeply researched and considered for investment. The third stage, <u>Exposure</u>, is primarily concerned with portfolio construction and the final stage, <u>Audit</u>, involves stock and portfolio monitoring and adjustment.

<u>Chapter Two - Returns</u> explores Pella's approach to generating investment returns with the aim of beating the Benchmark over the medium-to-long term. To deliver this goal Pella strives to construct a portfolio that is cheaper, growing faster, and has superior Sustainability to the Benchmark. At the stock level Pella equally emphasises growth and valuation and has target valuation metrics given sustainable growth rates and vice-versa. At the portfolio level, Pella seeks several uncorrelated exposures to enable multiple opportunities for return generation.

In <u>Chapter Three - Risk Management</u> Pella defines risk as 'permanent capital loss <u>and</u> volatility of returns'. Pella aims to have less severe drawdowns and lower volatility of returns than the Benchmark. At the stock level, Pella applies risk metrics that relate to areas such as leverage, liquidity, sustainability, valuation/growth, macro-outlook, binary bets, and turnarounds with a position's weight and risk management reflecting its risk metrics. At the portfolio level, Pella applies exposure limits, strives to ensure the portfolio is sufficiently diversified, and actively manages the portfolio in response to emerging risks.

<u>Chapter Four - Sustainability</u> explains Pella's process to construct a portfolio with sustainable outcomes in both an absolute sense and relative to its Benchmark. To do this Pella starts by constructing a portfolio that is composed of *'activities that can continue over the long term*

because they do not come at a material cost to current or future generations'. This is delivered by through ESG integration, negative screen and norms-based screen, and ensuring the portfolio has a low carbon footprint. Following that seek to deliver beyond sustainability by targeting positive impact themes, ESG integration and corporate engagement, which together help ensure Pella's funds are more sustainable than their Benchmarks. In addition, the chapter explains how Pella fulfills its Advocacy and Transparency responsibilities as a Responsible Investor.

CHAPTER ONE - PROCESS

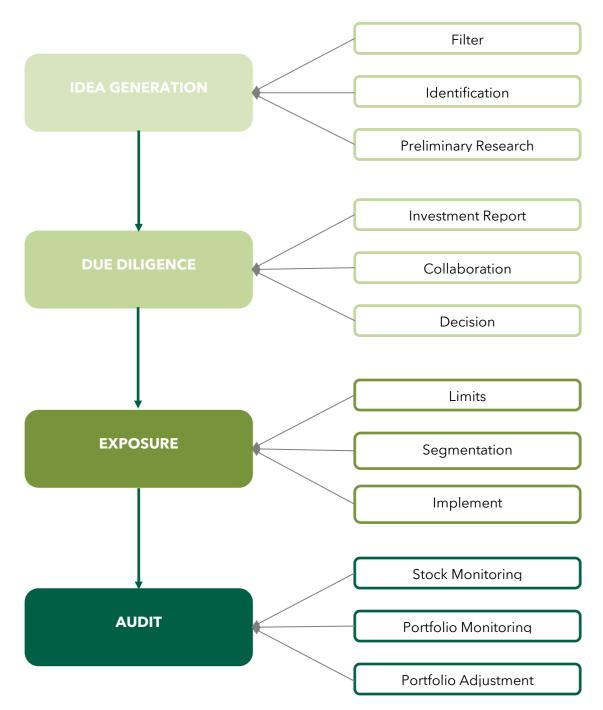

Figure 2 - Pella's Responsible Investing Model

Source - Pella Funds Management

Pella's divides its investment process into four stages; Incubation, Discovery, Exposure, Audit ('IDEA'), which are comprised of 12 inputs (Figure 3).

Source - Pella Funds Management

1. Idea Generation

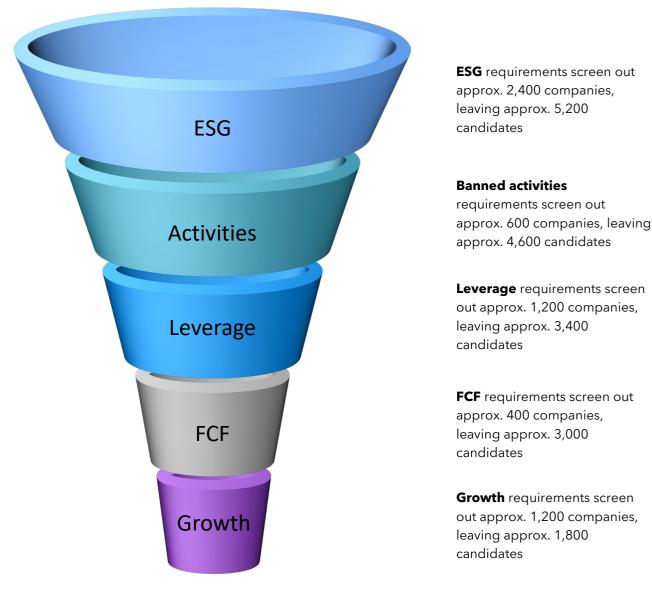

Idea Generation involves sourcing ideas and developing them to the point where a decision can be made whether to progress the idea to deeper analysis. The three inputs in the Incubation phase are: (i) Filter; (ii) Identification; (iii) Preliminary Research. The goal of the Incubation step is to select candidates for Due Diligence.

1.1. Filter

Incubation starts with dimensioning Pella's investable universe by screening-out companies that don't have the characteristics Pella seeks. There are 75,000 listed equities in the world, of which

roughly 7,600 have a market cap >US\$1.5Bn. Post application of Pella's ESG, banned activities, leverage, free cash flow and growth requirements, approximately 1,800 companies remain.

Figure 4 - Pella Global Sustainable Fund Investment Funnel

1.2. Identification

Post filtering the investment universe, Pella seeks to identify candidates from that investment universe for further research. These ideas are identified from three primary avenues: (i) ProPella; (ii) Analysts; (iii) CIO.

ProPella - ProPella is Pella's internal proprietary database. It aggregates data from several sources including third-party quantitative financial databases, Pella's interactions with companies, and ESG research providers. There are over 7,600 companies in ProPella, generating over 300,000 metrics which are sorted, integrated, and analysed to help identify investment candidates.

Analysts - Analysts are encouraged to identify investment ideas. These ideas often follow company interactions, external research, quantitative screens, and other observations.

CIO - CIO will identify certain trends or areas of improvement in the portfolio and nominate certain sectors or companies to be investigated. These companies will be tested to determine if they are candidates for the Preliminary Research phase.

1.3. Preliminary Research

Preliminary Research involves elementary research of a candidate company to determine if the candidate warrants progression into the Due Diligence stage. There are three parts to this input.

- **1. Ownership** once a candidate for further research is identified, an Analyst takes ownership of the research process and prepares a preliminary research report.
- 2. **Report** this research report identifies key drivers and risks associated with the candidate companies along with a rudimentary valuation and is used to confirm the candidate offers the characteristics that initially made it attractive. The report is discussed with the CIO/Portfolio Manager to assess its suitability for addition to the portfolio. The CIO/PM considers the individual quality of the investment idea, whether the candidate would enhance the overall metrics for the portfolio, and how the candidate would affect the portfolio's risk metrics.
- **3. Conclusion** if the CIO/PM and Analyst agree that further research is warranted on the candidate company, it proceeds to Due Diligence. Regardless of whether the company progresses or not, the thinking behind the decision is recorded in ProPella.

2. Due Diligence

Due Diligence involves in-depth analysis of investment candidates, over three stages: (i) Investment Report; (ii) Collaboration; (iii) Decision.

2.1. Investment Report

The Analyst responsible for the candidate company prepares a detailed investment report on it. While the Analyst prepares most of the report independently, they regularly collaborate with the CIO/PM to ensure the analysis covers all the areas of interest to the CIO/PM. Some of the more frequent areas of analysis include:

Management quality - some considerations include management track-record, whether management is investing for the long-term or harvesting the short-term, and management's attitude towards stakeholders.

ESG-related issues - determine if Pella's assessment of the company's ESG credentials align with the ESG rating agencies and whether there are any additional ESG-related issues requiring further analysis. Pella's ESG process is further explained in <u>Chapter Four - Sustainability</u>.

Industry analysis - understand the market structure and how the company fits into it.

FCF yield scrutiny - analyse the financial statements to determine the company's FCF yield. This involves understanding the underlying FCF generation and the candidate's capital structure.

Growth drivers - determine the candidate's key growth drivers and its sustainable growth rate.

Micro and macro risks - expand on the candidate's key micro and macro risks.

Finally, the investment report should identify the key metrics Pella will observe to determine if the company is fulfilling Pella's investment expectations.

2.2. Collaboration

The Investment Report is distributed to the Investment Team to collaborate on the candidate. The Investment Team conducts an open forum discussion with the aim of bringing to light any remaining material issues and assess the investment case. Further analytic work follows these meetings, and this can be an iterative process until all key issues are identified and considered.

2.3. Decision

The CIO/PM makes the ultimate decision to invest or not. If the decision is to not invest, the reasons are documented in ProPella. If the decision is to invest, the candidate progresses to the next phase of the investment process.

3. Exposure

Exposure involves developing exposure to the candidate via the portfolio construction process. This stage has three inputs: (i) Exposure and ESG limits; (ii) Segmentation Strategy; (iii) Decision.

3.1. Limits

Pella has predefined country, region, and sector exposure limits to ensure the portfolio is not over-exposed to one area. The maximum exposure to any one sector is 25% of the fund. The maximum exposure to any one country is 10% above the Benchmark weight. The maximum exposure to any one region is 25% above the Benchmark weight

Table 1 illustrates that the maximum weight of a company with a MSCI ESG rating of B or BB, or no MSCI ESG rating, is 3% (at cost) and the maximum weight of a company with a MSCI ESG rating of BBB, A, AA, or AAA is 5% (at cost). Furthermore, the aggregate portfolio ESG rating must be greater than the Benchmark and the portfolio's carbon intensity should be at least 30% lower than the Benchmark. This is explained further in <u>Chapter Four – Sustainability</u>.

3.2. Segmentation Strategy

Every company is classified as either Core, Cyclical, or Innovation with the classification having a direct impact on the position size. The maximum weight of a Core position is 5% (at cost) whereas for Cyclical and Innovation it is 3% (at cost). The minimum weight for all positions is 1%, to avoid developing a long tail of low conviction ideas.

| MSCI ESG Rating | Core | Cyclical | Innovation |
|-----------------------------------|------|----------|------------|
| AAA, AA, A, BBB | 5% | 3% | 3% |
| BB, B | 3% | 3% | 3% |
| С | 0% | 0% | 0% |
| No MSCI ESG rating ⁽¹⁾ | 3% | 3% | 3% |

Table 1 - Max weight at cost

Source - Pella Funds Management

(1) These companies are initially subjected to Refinitiv rating, which Pella will convert into an equivalent MSCI rating. If there is no MSCI or Refinitiv rating, Pella will calculate a proprietary ESG rating, but regardless of the rating, their maximum weight is limited to 3% until they obtain a MSCI ESG rating of AAA, AA, A, or BBB

3.3. Implement

The CIO/PM is charged with determining portfolio weights within the guidelines explained in <u>Limits</u> and <u>Segmentation Strategy</u> segments above. The entry of a company into the portfolio might trigger adjustments to existing holdings to ensure the risks on a portfolio level remain

balanced. The ultimate results of the Exposure phase depend on correctly balancing the risk/return characteristics of the portfolio.

4. <u>Audit</u>

Audit involves three inputs: (i) Stock Monitoring; (ii) Portfolio Monitoring; (iii) Portfolio Adjustment.

4.1. Stock Monitoring

Analysts continually monitor the company's progress relative to Pella's investment case and the company's price relative to Pella's target valuations. Based on these inputs, the Analyst updates the investment case and provides the team with regular updates.

4.2. Portfolio Monitoring

The portfolio is constantly monitored to ensure it remains cheaper than the market, growing faster than the market, has superior Sustainability credentials to the market, and complies with Pella's various limits.

4.3. Portfolio Adjustment

The CIO/PM will adjust the portfolio based on several factors including the outcomes from <u>Stock</u> <u>Monitoring</u> and <u>Portfolio Monitoring</u>. In addition, the CIO/PM might adjust the portfolio in response to meaningful or anticipated changes in the market environment. These decisions are often made from a risk perspective and any actions taken would be with the aim of lowering the risk of permanent loss of capital to Pella's investors. For example, the adjustment might involve reducing exposure to at-risk sectors/geographies or increasing exposure to areas that are counter to the perceived risk.

CHAPTER TWO - RETURNS

Figure 5 - Pella's Responsible Investing Model

Source - Pella Funds Management

This chapter explains Pella's approach to generating investment returns with the aim of beating the Benchmark over the medium-to-long term. Pella believes that this will be delivered by constructing a portfolio that is cheaper, growing faster, and with superior Sustainability to the Benchmark. Pella approaches these goals from two angles: (i) Stock Level; (ii) Portfolio Level.

1. Stock Level

Pella places equal emphasis on a stock's growth and valuation. Pella believes that to achieve consistent long-term outperformance, growth must not be compromised for price, nor price for growth. Striking the right balance between the two is one of Pella's key value-add.

1.1. Sustainability of Growth

Pella exclusively invests in companies that are expected to sustainably grow. The Investment Team delve deeply into each company's long-term growth drivers to develop an informed view of the company's long-term growth outlook. During this analysis, the micro factors considered include competitive position and management quality and the macro factors include industry dynamics and the most relevant economic/cyclical factors for the company.

Pella's ideal investment candidates have a sustainably strong competitive position, proven management, consistent historical growth rates, concentrated industry structure and operate in a favourable long-term secular environment. Some themes Pella has identified as target rich environments for these stocks include:

- 1. Cleaner energy
- 2. Conservation and resource efficiency
- 3. Emerging market consumption
- 4. Health and longevity
- 5. Industrial resurgence
- 6. Technological disruption and connectivity

1.2. Valuation

Pella's valuation methodology focuses on free cash flow ('FCF') yield, which is calculated as a company's sustainable FCF generation divided by its enterprise value (market cap plus net debt). To calculate the sustainable free cash Pella focuses on the cash flow statement, rather than using a proxy of free cash flow, taken from the Statement of Operations (P&L).

To evaluate the attractiveness of a company's valuation, Pella compares a company's sustainable FCF yield to Pella's target FCF yield for that company. The target FCF yield is calculated using several factors, including: (i) risk-free rate; (ii) prevailing equity risk premium (ERP); (iii) company's sustainable growth rate; and (iv) company's risk profile.

The framework makes explicit allowance for each company's risk profile. This "raises the bar" for higher-risk companies by ensuring that they can only qualify for inclusion in the portfolio if their return characteristics are sufficiently attractive. The approach supports the other important part of Pella's over-arching goal: to have less severe drawdowns than the market during major market declines and to have lower volatility of returns than the Benchmark.

The framework's explicit allowance for risk also enables to Pella to target a lower FCF yield for companies with extremely attractive characteristics such as highly predictable cash flow growth or exceptionally low sensitivity to the economic/macro environment.

Figure 6 illustrates Pella's target FCF yield at various growth rates. The solid green line represents the Pella's required valuation/growth relationships and Pella's goal is for its portfolios to be above this line. The doted green line demonstrates the additional FCF yield that Pella demands for companies with higher-risk characteristics and the dashed green line represents the lower FCF yield Pella could tolerate for a low-risk company. The red line represents Pella's assessment of the valuation demands being priced into the market.

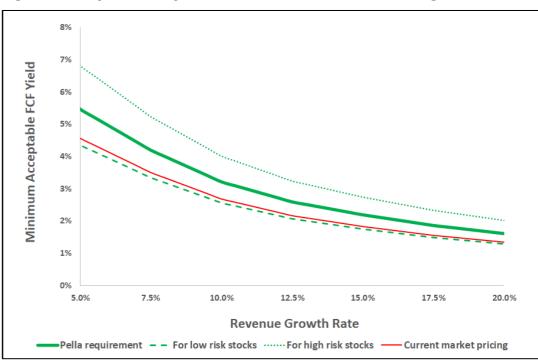

Figure 6 - Required FCF yield for different levels of revenue growth

As conditions change, Pella's dynamic framework ensures that the solid green line (Pella's required FCF yield/growth) always remains above the red line (the market), thereby ensuring

Source - Pella Funds Management

that Pella's valuation requirements remain more demanding than the broader market. This should contribute to Pella's portfolio producing superior returns to the benchmark over time, particularly on a risk-adjusted basis.

2. Portfolio Level

Pella's Portfolio Level targets are to construct a portfolio that is cheaper than the market, growing faster than the market, and has superior Sustainability characteristics to the market. By meeting these targets Pella believes it will achieve its core return aims of delivering superior returns and with lower volatility and superior Sustainability than the Benchmark.

Pella's portfolio targets 30-50 stocks with several uncorrelated return profiles. Pella believes this provides the right balance of concentration to avoid mimicking the Benchmark and diversification to reduce risk.

All positions are characterised as either Core, Cyclical, or Innovation, according to their risk and return profile. Core is companies with highly dependable return profiles. Cyclical is businesses operating in cyclical industries, which offer the potential to generate meaningfully positive returns over the remaining cycle. Innovation is fast growing, and often disruptive, businesses where Pella expect superior returns in the short to medium term.

Table 2 summarises key requirements for the segments. It demonstrates that Core comprises most of the portfolio with Cyclical and Innovation providing potential for differentiated returns to Core. Having most of the fund in Core allows Pella to supplement the growth delivered by these stable businesses with companies exposed to shorter and more powerful economic cycles (Cyclical) and companies with innovative and disruptive growth paths (Innovation). This mix allows the fund to benefit from a wide range of market conditions.

| | Core | Cyclical | Innovation |
|--------------------|--------------|--------------------|------------|
| Weight | 60-80% | 0-30% | 0-20% |
| Sustainable growth | 5-15% | n/a ⁽¹⁾ | n/a |
| Medium-term growth | 5-15% | >15% | >15% |
| Target FCF yield | Above market | >Core | >Core |
| Return profile | Stable | Cyclical | Variable |

Table 2 - Summarised Segment Requirements

Source - Pella Funds Management

(1) Sustainable growth for Cyclical can't be calculated with dependable accuracy owing to the cyclicality

CHAPTER THREE - RISK MANAGEMENT

Source - Pella Funds Management

Pella defines risk as permanent capital loss and volatility of returns and aims to have less severe drawdowns and lower volatility of returns than the Benchmark. To deliver this Pella applies risk management processes at the Stock Level and the Portfolio Level.

1. Stock Level

To define its investment universe, Pella applies the following risk metrics:

- **1. Leverage -** avoid companies with excess leverage.
- **2. Liquidity -** Pella considers the stock level liquidity criteria as the primary pre-investment liquidity requirements and the portfolio level criteria. These criteria are:
 - a. Target market cap floor is US\$1.5Bn
 - b. Maximum percent of company owned 5% of the outstanding shares.
- **3. Sustainability** Pella has several sustainability requirements which result in the exclusion of companies that Pella believes faces (potentially existential) risks from their behaviour or output. This is explained comprehensively in <u>Chapter Four Sustainability</u> and means Pella excludes companies with weak ESG practices or are involved in activities that unnecessarily harm the planet, people or animals, or are involved in material controversies.
- **4. Valuation/growth** target companies that are both growing and reasonably valued. This is explained in greater depth in <u>Chapter Two Returns</u>.
- 5. Macro Pella avoids companies that face severe secular headwinds.
- **6. Binary bets -** avoid companies whose investment case is a binary bet. For example, biotech companies with one drug in development that will make or break the company.
- **7. Turnarounds** avoid turnaround situations because Pella has observed that these are either rarely successful or do not proceed according to the anticipated time frame.

Pella has position limits for stocks based on their risk characteristics and stop losses for the riskiest stocks. Table 3 illustrates the position limits and demonstrates that the lowest risk stocks (Core with an ESG rating of BBB or higher) have maximum weight of 5% and no stop loss, while the riskier stocks (Cyclical/Innovation) have a maximum weight of 3% and stop losses.

| | (| | |
|-----------------|------|----------|------------|
| MSCI ESG Rating | Core | Cyclical | Innovation |
| AAA, AA, A, BBB | 5% | 3% | 3% |
| BB, B | 3% | 3% | 3% |
| С | 0% | 0% | 0% |
| No rating | 3% | 3% | 3% |
| Stop loss | No | Yes | Yes |

Table 3 - Max weight (at cost)

Source – Pella Funds Management

The stop losses applied to Cyclical and Innovation are triggered if the stock declines by 25% from its trailing high since Pella initiated a position in that stock.

Pella supplements the Stock Level risk management by seeking some exposure to companies that benefit from key macro risks. For example, Pella could seek positions that benefit from market dislocations, inflation spikes, an increase in corporate defaults, or a pandemic. These positions add to fund stability by generating gains in situations where most of the market declines.

2. Portfolio Level

The portfolio targets 30-50 stocks with uncorrelated returns to manage portfolio risk. This means there should never be one theme or market environment that will dominate the fund's risk. This contributes to limiting losses during severe market downturns and to stable returns.

As part of the strategy to distribute the fund's exposures and avoid overcrowding Pella has exposure limits, outlined below:

- **1. Sector limit -** maximum exposure to any one sector is 25% of the fund. There is no minimum floor, and the fund can have zero exposure to a sector.
- 2. Country limit maximum exposure to any one country for the fund is 10% above the Benchmark weight and there is no minimum exposure. For example, if the US is 55% of the Benchmark, the Fund's maximum exposure to the US is 65% and the fund could also have 0% invested in the US.
- **3. Regional limit -** maximum exposure to any region is 25% above the Benchmark weight and there is no minimum exposure. For example, if Europe is 15% of the Benchmark, the Fund's maximum exposure to Europe is 40% and the fund could also have 0% invested in Europe.
- **4. ESG limits -** minimum 30% of the fund invested in stocks with a MSCI ESG-rating of A or above and minimum 70% of the fund invested in stocks with a MSCI ESG-rating of BBB or above.
- **5. Excluded activities -** Pella excludes several activities from its investment universe, including tobacco, casinos, animal cruelty, fossil fuel mining, deforestation, among other activities. These activities are listed in Table 12 in <u>Chapter Four Sustainability</u>.
- **6. Cash limit -** maximum cash held in the fund is 20% to ensure the fund positioning doesn't reflect bets on market direction, using cash, while not forcing Pella to invest when the Investment Team is in the process of identifying suitable candidates.
- **7. Fund liquidity -** Pella considers the portfolio level liquidity criteria as the primary ongoing (post investment) liquidity requirements. The key requirement is that it is possible to liquidate at least 67% of the portfolio within five trading days, at 20% of the daily trading

volume, and assuming the fund is at its theoretical capacity. Pella's methodology for delivering this as follows:

- a. Calculate theoretical daily trading volume calculated by multiplying the trailing twelve-month <u>median</u> daily trading volume for each position by its most recent closing price.
- b. Calculate position size assuming fund at capacity multiple each position's weight in the portfolio by the fund's capacity limit.
- c. Calculate the percent of each position that can be sold calculating the percent of each position that can be liquidated using several different assumptions of days trading and percent of the stock's daily trading volumes.
- d. Sensitivity analysis calculate the percent of the portfolio that be liquidated using the aggregate of the position calculations under several trading day (5-days, 10-days, 20-days) assumptions and percent of daily trading volume (10%, 15%, 20%, 25%) assumptions.
- e. Corrective action if the fund does not comply with Pella's liquidity requirements, take immediate corrective action to bring the portfolio into compliance. This would involve reducing exposure to less liquid positions.
- 8. Active management the portfolio will be adjusted in response to the changes in the market environment that meaningfully impact Pella's risk assessment. Actionable examples include reducing exposures to the most at-risk regions or sectors or increasing exposure to positions that benefit from the perceived risk.

Limits are also applied using Pella's segmentation strategy (Core, Cyclical, Innovation), which serves as a portfolio risk budget. Companies classified as Core have the lowest risk profiles and are afforded the highest fund allocation. Cyclical and Innovation offer higher return expectations but also have higher risks and are limited to a maximum combined 40% of the portfolio.

| | Core | Cyclical | Innovation |
|----------------|--------|----------|------------|
| Weight | 60-80% | 0-30% | 0-20% |
| Return profile | Stable | Cyclical | Variable |

Table 4 - Summarised Segment Limits

Source - Pella Funds Management

CHAPTER FOUR - SUSTAINABILITY

Figure 8 - Pella's Responsible Investing Model

Source - Pella Funds Management

Pella's goal is to construct a portfolio with sustainable outcomes in both an absolute sense and relative to its Benchmark. To do this Pella initially focuses on delivering a portfolio that doesn't have activities that come at a cost to current or future generations. Following that Pella aims to invest whenever financial considerations allow into companies that have a positive impact on current and future generations. Finally, Pella recognizes its Investment Stewardship responsibilities, which includes engagement, voting, advocacy, and transparency.

1. Delivering Sustainability

Pella defines sustainability as 'activities that can continue over the long term because they do not come at a material cost to current or future generations'. To satisfy this definition, Pella focuses on two objectives, the first relates to **companies' activities** and the second relates to **companies' behaviour** and they are summarised in Table 5. Pella believes delivering on these objectives results in a sustainable fund.

The first objective is to 'avoid harmful corporate activity' and Pella avoids corporate activities that come at a material cost to current or future generations. This is primarily delivered via Pella's <u>Negative Screen strategy</u> and is supplemented with Pella's <u>Sustainability-Themed</u> strategy.

The second objective is to 'avoid harmful corporate behaviour'. This identifies companies that are not involved in harmful corporate activities but nonetheless behave in a manner that comes at a cost to future generations. To satisfy this objective Pella utilises two sustainability strategies: <u>ESG Integration</u> and <u>Norms-Based</u>.

| Objective | Measurement | Strategy | Targets |
|---|---|---|--|
| 1. Avoid harmful corporate activity | Revenue from activities Carbon intensity | Negative Screen Sustainability Theme | No exposure to harmful activities Portfolio carbon intensity at least 30% below the Benchmark |

Table 5 - Pella's Sustainability Objectives

- 2. Avoid harmful corporate behaviour
- ESG rating ⁽¹⁾
- Norms-based compliance
- ESG integration
- Norms-Based Screen
- No CCC-rated ⁽¹⁾ investments
- Portfolio ESG rating equal to or greater than the Benchmark ESG rating ⁽¹⁾
- No exposure to controversial behaviour that is a breach of Norm-Based Screen

Source - Pella Funds Management (1) MSCI ESG rating

2. Delivering 'Beyond Sustainability'

While Sustainability primarily utilises avoidance strategies, 'Beyond Sustainability' utilise improvement strategies. Having delivered a sustainable fund, Pella strives to deliver *Beyond Sustainability* by seeking to invest in companies that offer a meaningfully positive impact on current or future generations, or by Pella being an active participant in change. To deliver on this strategy Pella applies three objectives, which are summarised in Table 6 and Pella believes that delivering on them results in *Beyond Sustainability*.

The first objective is to 'reward positive *corporate activity*' and Pella seeks to maximise exposure to corporate activities that fall within Pella's <u>Positive Impact Themes</u>, which are linked to the UN Sustainable Development Goals ('SDGs') and satisfy Pella's financial requirements. The second objective is to '*reward positive corporate behaviour*' and Pella focuses its portfolios on higher ESG-rated businesses via Pella's <u>ESG Integration</u> strategy. The third objective is for Pella to be an '*active participant of change*', which is delivered via Pella's <u>Engagement Policy</u>.

| O | ojective | Measurement | Strategy | Targets |
|----|---|--|---|--|
| 1. | Reward positive corporate activity | • Revenue from activities | <u>Positive</u> <u>Impact</u> <u>Themes</u> | Invest in positive impact companies when they satisfy Pella's financial requirements |
| 2. | Reward positive corporate behaviour | • ESG rating ⁽¹⁾ | • <u>ESG</u> Integration | >30% of portfolio invested in companies with AAA, AA, A ratings ⁽¹⁾ >70% of portfolio invested in companies with AAA, AA, A, or BBB ratings ⁽¹⁾ Only Core companies with a ESG rating of AAA, AA, A, or BBB ⁽¹⁾ are candidates for maximum position weight. |
| 3. | Active participant in change | Portfolio positions with an ESG rating Shareholder vote participation | • <u>Engagement</u> <u>Policy</u> | 100% of portfolio positions have either a MSCI ESG rating or are actively moving towards one. Participate in 100% of shareholder votes Influence at least one ESG improvement in an investment p.a. |

Table 6 - Pella's Beyond Sustainability Objectives

3. Sustainability and Beyond Sustainability Strategies

Several strategies are required to deliver Pella's Sustainability and Beyond Sustainability objectives. Table 7 summarises these strategies and targets. In addition to implementing the strategies individually, Pella combines some strategies to develop a Sustainability Score that helps navigate the sustainability shades of grey. The Score's calculation is illustrated in Figure 9. Only companies with a Score of ≥0 are viable for inclusion in Pella's portfolio.

| Strategy | Key measures | Targets |
|--------------------------|---|--|
| ESG Integration | Portfolio aggregate ESG rating and score % Of portfolio invested in companies with exemplary ESG rating | Portfolio ESG rating ⁽¹⁾ superior to the Benchmark ⁽²⁾ ESG rating >30% of portfolio invested in companies with ESG rating ⁽¹⁾ of AAA, AA, or A >70% of portfolio invested in companies with ESG rating ⁽¹⁾ of AAA, AA, A, or BBB |
| Negative Screen | % Of portfolio invested in companies that are involved in activities that are included in the Negative Screen | 0% of portfolio invested in companies involved in these activities ⁽³⁾ |
| Norms-Based Screen | • % Of portfolio invested in companies that breach Norms-Based practices. | 0% of portfolio invested in companies that breach Norms-Based practices |
| Corporate Engagement | % Of portfolio's shareholder votes that Pella participates in Number of instances Pella is a catalyst to either improved ESG practices by investee companies or an unrated company obtaining an ESG rating | Participate in 100% of votes Improve the ESG practices of least one investee company p.a. |
| Positive Impact | % Of portfolio invested in companies with meaningful exposure to one or more of Pella's Positive Impact Themes | Invest in these companies whenever they satisfy Pella's financial criteria, including valuation |
| Sustainability Themed | Portfolio carbon intensity | Carbon intensity of portfolio is at least 30% below the Benchmark |

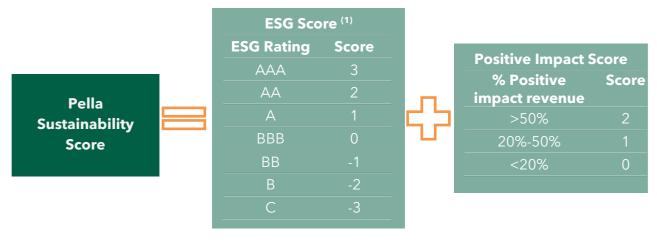

Source - Pella Funds Management

(1) MSCI ESG Rating

(2) Benchmark is MSCI ACWI

(3) Pella has some tolerance for companies that generate <15% of their revenue from an excluded activity and have commenced exiting that business altogether with a set timeline, as Pella regards these situations as a timing issue more than anything else

Figure 9 - Pella's Sustainability Score calculation

Source - Pella Funds Management (1) Lower of MSCI ESG rating and Pella ESG rating

3.1. ESG Integration

Pella incorporates ESG considerations throughout its investment process. This is delivered using internal analysis, MSCI and Refinitiv ESG ratings, and assessing controversies. Table 8 is a non-exhaustive summary of common ESG issues Pella considers.

| Pillar | lssues |
|-------------|---|
| Environment | Climate change - uranium & nuclear power, fossil fuels, carbon footprint Sustainability - renewable energy, deforestation Biodiversity and water - management of water resources, GMO Pollution & waste - waste reduction, recycling, water treatment, packaging materials |
| Social | Human capital - workplace health & safety, labour standards Product liability - product safety, privacy & data security, chemical safety Human rights - liberty, affordable housing, equality Community standards - animal cruelty, alcohol, junk food, weapons |
| Governance | Management structure - director independence, remuneration, board entrenchment Governance - compliance, board accountability Ethics - transparency, corruption, tax strategy |

Table 8 - Common ESG issues

Source - Pella Funds Management

Pella integrates ESG considerations at the Stock Level and the Portfolio Level, with the process for each level summarised in Table 9.

Table 9 - ESG Integration process summary

| Stock Level | Portfolio Level |
|---|--|
| Pre-Research Exclusion - screen out companies rated by MSCI as CCC & identify companies MSCI rates B or BB, which require positive impact for inclusion. | Portfolio weights - max individual stock weight is partly a function of MSCI ESG rating |

| Fundamental Research - identify key ESG issues through internal analysis, supplemented with MSCI and Refinitiv ESG analysis | Quality Assurance - ensure aggregate portfolio weights fit into rating guidelines |
|--|---|
| Documentation - ESG templates in research reports & ProPella database. | Continuous Improvement - identify the portfolio's areas of strength & areas with most potential for improvement |
| | ESG Benchmarking - measure portfolio ESG rating & ensure it is superior to the |
| Source - Pella Funds Management | Benchmark |
| | |

Stock Level

The Stock Level integration is divided into three parts: (i) Pre-Research Exclusion; (ii) Fundamental Research; (iii) Documentation.

Pre-Research Exclusion starts with screening out all companies with a MSCI ESG rating of CCC, which fall outside Pella's investment universe. It also involves identifying all companies with a MSIC ESG rating of B or BB, which are within Pella's investment universe but must have a positive sustainable impact for inclusion, with this explained further in the <u>Positive Impact</u> <u>Themes</u> section. Companies with no rating may be included subject to passing Pella's internal ESG analysis and Pella engaging with the company to obtain a MSCI ESG rating.

Fundamental Research applies to companies that fall in Pella's investment universe. Pella analyses the ESG of all companies considered for portfolio inclusion. This involves bottom-up fundamental research, which is supplemented with MSCI and Refinitiv ESG research and ISS voting research. One of the primary objectives of this research is to identify companies that Pella assesses to have breached the UN Global Compact and should be excluded from Pella's investment universe, regardless of the companies' MSCI ESG rating. Accordingly, in addition to standard ESG metrics, this analysis emphasises controversies.

Documentation involves documenting key ESG issues for all companies Pella research for potential inclusion in the portfolio. This documentation includes identifying key ESG issues, reporting on Pella's position on these issues, identifying key controversies and explaining Pella's position on those controversies.

<u>Portfolio Level</u>

The Portfolio Level integration is divided into four parts: (i) Portfolio Weight; (ii) Quality Assurance; (iii) Continuous Improvement; (iv) ESG Benchmarking.

Portfolio Weight is concerned with determining the appropriate weights for investment ideas and is involved with at least four primary factors, one of which is ESG. Pella has individual stock weight limits based on ESG considerations and Pella's portfolio segmentation strategy.

| MSCI ESG Rating | Core | Cyclical | Innovation |
|-----------------|------|----------|------------|
| AAA, AA, A, BBB | 5% | 3% | 3% |
| BB, B | 3% | 3% | 3% |
| С | 0% | 0% | 0% |

Table 10 - Max weight at cost

| No MSCI ESG rating ⁽¹⁾ | 3% | 3% | 3% |
|-----------------------------------|----|----|----|
|-----------------------------------|----|----|----|

Source - Pella Funds Management

(1) These companies are initially subjected to Refinitiv rating, which Pella will convert into an equivalent MSCI rating. If there is no MSCI or Refinitiv rating, Pella will calculate a proprietary ESG rating, but regardless of the rating, their maximum weight is limited to 3% until they obtain a MSCI ESG rating of AAA, AA, A, or BBB

Quality Assurance ensures that the aggregate portfolio weights sit within Pella's ESG targets. Table 11 summarises the portfolio's rating targets, with the key takeaway being that the portfolio targets a superior ESG rating to the Benchmark.

Table 11 - PGS portfolio ESG rating requirements

| MSCI Rating | Pella's requirement |
|----------------------------|---------------------------|
| AAA, AA, A | >30% of portfolio |
| AAA, AA, A, BBB | >70% of portfolio |
| Portfolio aggregate rating | Superior to the Benchmark |

Source - Pella Funds Management

Continuous Improvement focuses on improving the portfolio, and the underlying investments' ESG characteristics. It involves identifying the portfolio's key ESG strengths and areas with the greatest potential for improvement. Continuous Improvement is divided into two parts:

- *Companies with B ratings* identify the key areas of ESG weakness to engage with company to improve.
- *Companies with no MSCI ESG ratings* engage with company and MSCI with the goal of getting the company rated.

ESG Benchmarking involves ensuring the portfolio's aggregate ESG rating is superior to the Benchmark's MSCI-ESG rating.

3.2. Negative Screen

Negative Screens are applied at the start of the research process. Companies generating revenue from the activities listed in Table 12 are excluded from Pella's investment universe. Pella identifies these companies using its own fundamental analysis, supplemented with research from external research providers.

Pella's investment process starts with an analysis of key revenue drivers so that Pella doesn't waste time researching companies that fall into the exclusion list. The exclusion list is also activated if a company in Pella's investment universe moves into one of the excluded activities, which would trigger an automatic sell if the company was in the portfolio.

Table 12 - Negative screen revenue materiality

| Activity | Revenue materiality | Rationale |
|--------------------------------------|--|---|
| Alcoholic beverages manufacturing | 0% | Alcoholic beverages can be consumed in moderation but provide minimal health or societal benefits while being the cause of several severe negative outcomes. Pella excludes companies that generate revenue from manufacturing alcoholic beverages. |
| Animal cruelty | 0% for cosmetic testing, crowd entertainment, intensive animal husbandry | There is no need to test cosmetics on animals or to use animals for live crowd entertainment. Pella does not oppose humanely farming for human consumption (food or by-products) however, those animals should be treated with dignity and have a good quality of life. |
| Correctional facilities | 0% | Pella believes that profiting from the incarceration of people is a breach of human rights. Further, there is evidence that the profit motive can encourage an increase in the number and term of incarcerations. |
| Deforestation | 0% | An old-growth forest has attained great age without significant disturbance and exhibits unique ecological features. Pella believes that cutting down these forests cause unnecessary damage as specialised tree plantations can be used for wood and existing farmland can be used more productively. Pella excludes companies with direct exposure to destroying old-growth forests, including paper and pulp companies that use old-growth wood, transporters of such wood, and manufacturers that use old growth palm trees. |
| Fossil fuel generation | 0% - thermal coal ⁽¹⁾ 15% - gas | Fossil fuels are leading sources of greenhouse gas emissions and other environmental damage, including ecological damage from oil spills. The developed world is rapidly approaching a point where it is technically and economically possible to replace fossil fuels with sustainable alternatives for most of our energy and manufacturing needs. To encourage this transition Pella excludes companies that generate revenue from thermal coal power generation and companies that generate more than 15% of their revenue from gas-fired generation. The 15% threshold reflects the use of standby gas generation for peak load scenarios, which often cannot be provided by renewable energy. This threshold will decline as batteries become a viable alternative to gas for peak load electricity generation. Pella also excludes electricity generators that exceed gCO2/kWh carbon intensity threshold recommended in the Paris Agreement or do not disclose their emissions. |
| Fossil fuel mining/exploration | 0% | Pella opposes growth in fossil fuel usage and mining extraction of these commodities and excludes companies with any direct exposure to fossil fuel exploration. |

| Gambling | 0% | Gambling provides no societal benefits and comes as a material cost to portions of society. Pella regards it as an activity that causes unnecessary harm and excludes enterprises that generate any revenue from direct exposure to slot machines, casino operations (online and/or physical), lotteries, sports/other betting. |
|----------------------------|----|---|
| GMO seeds manufacturing | 0% | Pella has two primary concerns with GMO seeds: (i) excessive corporate dominance as farmers become locked into the seed manufacturers; (ii) potential negative environmental impact from GMO seeds usurping traditional seeds in the ecosystem. |
| Norms-Based | 0% | Norms-based screen involves identifying and excluding companies that do not meet minimum standards of business practices based on international norms and conventions, primarily based on the UN Global Compact (UNGC). |
| Porn | 0% | Pornography provides no societal benefits and comes at a material cost to portions of society. Pella regards it as an activity that causes unnecessary harm and excludes enterprises that generate any of revenue from pornography related activities. |
| Tobacco | 0% | Tobacco products provide minimal if any health or societal benefits while being the cause of several severe negative health outcomes. Pella excludes all companies involved in the production of tobacco and companies with significant ownership (due to holding directly, more than 10% of shares) in such companies |
| Uranium mining | 0% | Uranium has a half-life of 4.5 billion years and is the cause of significant environmental damage if not properly contained during that time. Furthermore, uranium is the key input for atomic weapons. Pella has zero tolerance for weapons, and it is increasingly economically and technically possible to replace uranium with sustainable energy. |
| Weapons | 0% | There is no productive use for any weapon designed to kill, maim, or otherwise severely injury people. Pella excludes companies that generate any revenue from selling or distributing such weapons or weapon delivery systems. This exclusion is all encompassing and includes weapons and delivery systems that that comply with weapon treaties including: Treaty on the Non-Proliferation of Nuclear Weapons (1968) Biological Weapons Convention (1975), Ottawa Treaty (1997), Chemical Weapons Convention (1997), and Convention on Cluster Munitions (2008). |

Source - Pella Funds Management

(1) Pella supports businesses transitioning away from thermal coal and will allow electricity generators that generate <5% of their revenue from thermal coal generation but are transitioning away from thermal coal and will fully exit thermal coal powered generation within three years from Pella's initial investment in the company.

3.3. Norms-Based Policy

Norms-Based Policy involves identifying and excluding companies that do not meet minimum standards of business practices based on international norms and conventions. These practices are identified through controversies.

Pella applies these controversy screens to identify norms-based breaches at the start of its fundamental research during the <u>ESG Integration</u> process and monitors compliance throughout an investment's holding period. Pella primarily focuses on compliance with the UN Global Compact (UNGC). Figure 10 illustrates Pella's decision process for controversies and norms-based issues. The key steps in the process include

Identification - the process commences with Pella identify breach(s) using Pella's qualitative research and MSCI ESG research. Controversies are often self-explanatory, however, Pella can also refer its <u>Controversies & Norms Based Analysis</u> (Appendix), which outlines key international conventions, to identify behaviour that constitutes a controversy.

Severity of controversy or regularity of controversies - Pella assesses the severity and number of breaches. The number is calculated using MSCI ESG research and Pella believes that five controversies within the past 12-months is a threshold for further analysis. However, Pella takes into consideration that larger companies are likely to have a greater number of breaches than smaller ones owing to the breadth of their operations and the fact that their controversies are more likely to be reported in the press and counted by MSCI. Pella assesses severity in conjunction with MSCI definitions and the various conventions outlined I Pella's <u>Controversies & Norms Based Analysis</u> (Appendix). Pella consider the most severe breaches as: Forced labour/slavery; Child labour; Genocide or ethnocide.

Engagement - Pella engages with the company to fully understand the nature of the controversy, how it occurred and the company's intended resolution. If Pella is satisfied that the company is taking appropriate action to resolve it and stop similar controversies from reoccurring, Pella considers the controversy resolved and no further action is required. If Pella believe the company is not taking sufficient steps to resolve the controversy, Pella will suggest an alternative, more appropriate resolution. This typically takes the form of management meetings and writing letters to the Board.

Rectification - Pella assesses whether the controversy/pattern of controversies is being rectified by the company. This is assessed by considering what the company says and what it is doing. Pella expects companies to introduce rectification initiatives expediently and for there to be evidence of the rectification process within a handful of months. The requirement to observe rectification action can take some time, meaning the process may be positioned on this step while the company takes the action and Pella assesses it.

Action - if the company is not rectifying the action Pella will exit or not invest in the company. If the controversy is being fully rectified Pella may continue holding the company in its portfolio or continue researching the candidate.

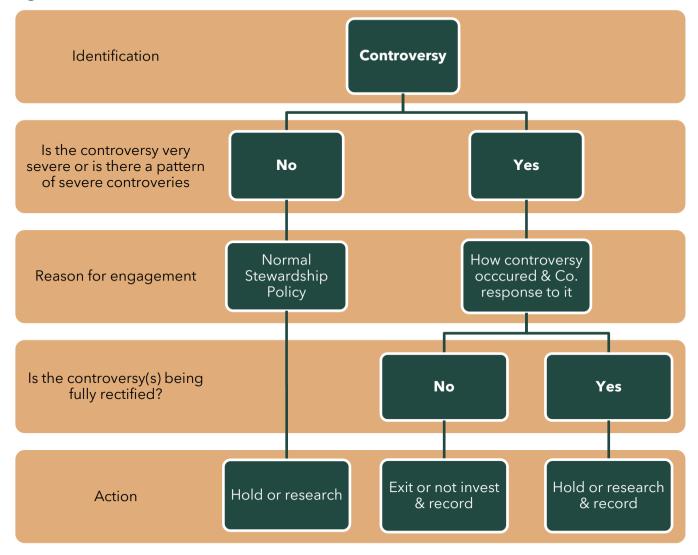

Figure 10 - Decision tree for controversies and norms-based issues

Source - Pella Funds Management

3.4. Positive Impact Themes

Pella identified six themes that generate positive outcomes for current or future generations at no cost to current or future generations and have several companies that are likely to satisfy Pella's financial requirements. These themes are listed below and relate to several SDG targets, as illustrated in Table 35 (Appendix). The themes are dynamic and could expand as new opportunities arise.

- 1. **Cleaner Energy** replace fossil fuel derived energy with energy from renewable sources such as wind or solar energy. This theme also includes batteries where the batteries can be charged with renewable energy.
- 2. **Conservation & Resource Efficiency** assist in the conservation of the natural environment by using fewer natural resources, thereby reducing pollution, and encouraging resource efficiency.
- 3. **Improved Health** goods and services that have positive health outcomes, including medicines, medical and health-related equipment, and health-related services.
- 4. **Safety** technologies and services that improve societal safety, including technologies that reduce pollution, increase vehicle safety, or improve water quality.
- 5. **Inclusiveness** services, products or conduct that create equal opportunities for all women, men, and children.
- 6. **Economic participation** activities that serve lower demographics or encourage economic growth in emerging markets.

3.5. Sustainability-Themed

Pella targets portfolio CO₂ intensity to be at least 30% below the Benchmark¹ with CO₂ intensity measured using Scope 1 and Scope 2 carbon emissions relative to revenue as calculated by Refinitiv.

4. Investment Stewardship Strategies

4.1. Investment Stewardship Policy

Introduction

Pella refers to the UNPRI definition of Investment Stewardship:

Stewardship is investors using their influence over current or potential investees/issuers, policy makers, service providers and other stakeholders – often collaboratively – to maximise overall long-term value. This includes the value of the common economic, social and environmental assets on which returns and clients' and beneficiaries' interests depend.²

Pella applies four primary tools to fulfill its Investment Stewardship responsibilities, including:

- 1. Engagement
- 2. Voting
- 3. Advocacy
- 4. Transparency

Pella incorporates Investment Stewardship considerations and behaviours into all the investments made by the funds it manages.

¹ MSCI ACWI

² <u>UNPRI, Introduction to responsible investing, an introduction to responsible investing stewardship</u>

<u>Engagement</u>

Engagement can take several forms, all of which are intended to monitor and provide feedback to companies and helps inform our voting decisions. Pella expects to engage with 100% of its portfolio companies at least annually. Pella's standard engagement practices involve discussing key ESG issues with the companies to deepen Pella's understanding of the issues and how the company is managing them.

Pella deepens its engagement in certain circumstances.

- Portfolio companies with MSCI ESG rating of B
- Portfolio companies with no MSCI ESG rating
- Severe controversies
- MSCI ESG-rating downgrade
- Annual Key Initiative Pella annually selects a key ESG-relate initiative to actively improve across its investment portfolio.

Refer to <u>Engagement Policy</u> for additional information on this subject.

Proxy Voting

Pella prefers owning voting shares over non-voting shares and participates in all votes at its investments' Annual General Meetings and other shareholding meetings. Pella's voting position is informed by research provided by third party proxy voting advisors and Pella's internal research. In instances where Pella intends to vote contrary to the advice provided by the Board of Directors of our investments' Pella formally communicate to the company of its intention and thinking behind it prior to the meeting, to give the company an opportunity to amend their approach to the matter.

Refer to <u>Proxy Voting Policy</u> for additional information on this subject.

<u>Advocacy</u>

Pella understands that investment decisions alone are insufficient to increase global sustainability and that investment managers have a responsibility to advocate for that cause through other methods. To fulfill this responsibility, Pella engages in other initiatives such as: Accreditations and Signatory, Public Commentary, Participation.

Refer to <u>Advocacy Policy</u> for further information on this subject.

<u>Transparency</u>

Pella regards transparency as a critical ingredient for Investment Stewardship and Responsible Investing more broadly. The company defines its Transparency Policy as 'providing all the requisite information for all stakeholders to be able to make timely and fully informed decisions about Pella and its funds' financial and responsible investing decisions and outcomes'. To fulfill requirement Pella divides its communication strategy into the three Ps: (i) Policies; (ii) Portfolio; (iii) Practices. These data are made available in the following places

- 1. Pella website access to Pella's various policies, monthly fund reports, opinion pieces, and the annual Responsible Investment Report.
- 2. Monthly fund reports provides key investment and ESG data for the fund.

- 3. Quarterly report provides the same data as the monthly reports and adds the full portfolio, with a one quarter lag.
- 4. Annual Responsible Investment Report provides in-depth data and discussion about Pella's Responsible Investing activities, including: voting, reasoning behind key votes, Annual Key Initiative development, number of company interactions,

Refer to <u>Participation -</u> Pella seeks to be an active participant in local organizations that promote corporate sustainability. Pella also encourages every member of its team to participate in an ESG-related initiative and everyone has been provided with one paid workday per quarter to participate in that initiative.

Transparency Policy for further information on this subject.

4.2. Engagement Policy

Introduction

Pella recognises its responsibility to engage with its investments to remain informed and contribute to the investees' long-term performance. The Engagement can take several forms, all of which are intended to monitor and provide feedback to companies and helps inform our voting decisions.

Application of Policy

Engagement can take several forms, all of which are intended to monitor and provide feedback to companies and helps inform our voting decisions. Pella's engagement practices include:

- 1. regular and consistent meetings with executives from companies Pella invests in;
- 2. writing letters to companies.

Pella expects to engage with 100% of its portfolio companies at least annually. Pella's standard engagement practices involve discussing key ESG issues with the companies to deepen Pella's understanding of the issues and how the company is managing them.

In addition to the above, Pella deepens its engagement in certain circumstances.

- **Portfolio companies with MSCI ESG rating of B** engage with these companies to explain to them where their areas of ESG weakness are and to encourage the company to take remedial action.
- **Portfolio companies with no MSCI ESG rating** engage with the companies and, when possible, ESG rating companies, to encourage them to be rated.
- **Severe controversies** engage with companies to understand the nature of the controversy, how the company intends to resolve it, and to proactively encourage remedial action.
- MSCI ESG-rating downgrade apply same strategy as with 'Severe controversies'.
- Annual Key Initiative Pella annually selects a key ESG-relate initiative to actively improve across its investment portfolio. For example, in 2022, Pella actively sought to encourage its investments to become signatories to the UN Global Compact (UNGC). This initially involved Pella becoming a signatory to the UNGC. Following that Pella tracks which of its investments are signatories and sends letters to the ones that are not yet. Pella selects the annual initiative in January of each year.

Policy Limits

Pella's Engagement Policy does not apply in the following circumstances:

- 1. ESG rating downgraded to CCC triggers an automatic sell
- 2. Breach of norms-based screen and company does not fully rectify the breach triggers an automatic sell
- 3. Involved in a controversy, which Pella does not regard as serious no further engagement required
- 4. Company breaches Pella's negative screen triggers an automatic sell
- 5. Company hits Pella's stop loss limits triggers an automatic sell down of the position size

4.3. Proxy Voting Policy

Introduction

This Policy is based on fiduciary responsibilities to act in the best interest of clients as shareholders. It describes the approach taken by Pella Funds Management ('Pella') in relation to resolutions put forward by listed companies at Annual General Meetings (AGMs) and Extraordinary General Meetings (EGMs).

This policy applies to all relevant Pella employees involved in the proxy voting process. A copy of this Proxy Voting Policy and procedure will be provided to clients upon request.

Policy Statement

The purpose of this Voting Policy is to ensure Pella acts in the best interest of clients as shareholders and to help minimize the potential for Pella's investments to cause 'significant harm'.

Pella's policy is to vote participate in 100% its funds' investments votes. If Pella receives a direction from a client in relation to the appointment of a proxy and the way the proxy should be voted, Pella will use its best endeavours to implement the direction. In the absence of any direction, Pella may exercise or not exercise the right to vote as it sees fit, having regard to any direction in the investment mandate and taking into consideration: any material conflicts of interests identified, strategy, performance, risk, capital structure and corporate governances (including cultures and remuneration) of investee companies.

Process Overview and Procedures

- Proposed resolutions with explanatory notes are prepared and forwarded by the Pella's proxy voting service or middle office service provider.
- A member of Pella's Investment Team will review each material resolution on a case-by-case basis. In arriving at a recommendation three main principles are adhered to:
 - o any resolution should treat shareholders equally;
 - o any material conflicts of interest are addressed appropriately; and
 - resolutions should be individual and clearly stated. Composite resolutions are not regarded as optimal.
- To assist in decision making, Pella may subscribe to a proxy voting service which provides independent analysis and voting recommendations on key governance issues. Pella considers these recommendations when arriving at a decision.

- Pella may raise issues with company management prior to voting to resolve issues.
- Voting recommendations are approved by the Portfolio Manager (PM). When unable to physically approve, the PM can transfer the right of approval to one of the Analysts.
- Upon approval, votes are processed by Pella on an electronic proxy voting system.
- Pella will maintain a record of all voting on behalf of clients and report these to the client where requested.

Routine Proposals

Routine proposals are those which do not affect the structure, by laws, or operations of the corporation to the detriment of shareholders. Given the routine nature of these proposals, proxies will nearly always be voted with management. Traditionally, routine proposals include:

- Approval of independent auditors;
- Name changes;
- Election of directors (subject to competency, independence and limited number of board positions); or
- Coupling executive compensation with financial performance.

Non-Routine Proposals

Issues in this category are more likely to have a greater impact on shareholder value.

Pella' main concern is to protect the value of its clients' investments. These resolutions are subject to scrutiny on case-by-case basis. These types of resolutions may include:

- Mergers and acquisitions;
- Restructuring; or
- Employee share purchase plans

Corporate Governance Proposals

Pella will generally vote against any management proposals that have the effect of restricting the full potential of its clients' investments. These would include but not limited to:

- Excessive senior executive and non-executive management remuneration;
- Golden handshakes;
- Special interest representation on the board;
- Share and Option schemes that do not reflect:
 - the responsibilities of the executive;
 - o comparability to market practice;
 - o appropriate performance hurdle benchmarks;
 - o appropriate disclosure;
- Unequal voting rights; or
- Takeover Protection e.g. Poison Pills generally involves issuing preferred stock purchase rights or warrants unilaterally declared as a dividend without shareholder participation or approval. Poison pills can be used to insulate existing management against competitive bids.

Avoiding Significant Harm

Pella's policy is to vote in accordance with the concept of 'avoiding significant harm'. Pella defines significant harm as 'activities that come at a material cost to current or future generations'. This means Pella will vote against any activities that could be a breach of the UN Global Compact, the OECD Guidelines for Multinational Enterprises or any other internationally accepted behavioural norms. If the said activity is not explicitly voted on, Pella will prioritise the consideration of the matter in its decision on how to vote on executive remuneration and director re(election). Finally, Pella will seek to engage with the company on the matter, outside of the formal voting process.

Engagement with Companies

In addition to voting, Pella may enter dialogue with a company to voice concerns in relation to actions or directions a company is taking in relation to performance, corporate governance and other matters affecting shareholders' interests.

Conflicts of Interest

If a Pella employee detects a material conflict of interest in connection with voting on the resolutions, then the employee should escalate the matter to the Portfolio Manager and COO. In such circumstances Pella may abstain from voting if that action is deemed to be in its client's best interest.

Socially Responsible Policy Issues

Pella may decide to vote on such issues on a case-by-case basis recognising that social responsibility issues may impact the value of the shareholders' investment.

Generally, Pella does not apply specific socially responsible investment or methodologies screens, unless specifically directed by the client.

Class Actions

Pella does not direct clients' participation in class actions. The Portfolio Manager will determine whether to return any documentation inadvertently received regarding clients' participation in class actions to the sender, or to forward such information to the appropriate clients.

4.4. Advocacy Policy

Introduction

Pella understands that investment decisions alone are insufficient to increase global sustainability and that investment managers have a responsibility to advocate for that cause through other methods.

Application of Policy

To fulfill its Advocacy responsibilities, Pella engages in other initiatives such as:

• Accreditations and signatory - Responsible Investment Association of Australia (RIAA), UN Principles of Responsible Investing (UN PRI), UN Global Compact (UNGC).

- **Public commentary** Pella prepares public commentary on key ESG issues, all of which will be available in the Pella website, Pella's LinkedIn profile, and some of which will be in the public media.
- **Participation** Pella seeks to be an active participant in local organizations that promote corporate sustainability. Pella also encourages every member of its team to participate in an ESG-related initiative and everyone has been provided with one paid workday per quarter to participate in that initiative.

4.5. Monitoring Policy

Pella measures the Fund's performance relative to the sustainability targets daily and reports on the progress monthly and quarterly. In addition, Pella undertakes a comprehensive annual review of the Funds' performance relative to the sustainability targets and reports the performance in the Annual Responsible Investing Report.

4.6. Transparency Policy

Introduction

Pella regards transparency as a critical ingredient for Investment Stewardship and Responsible Investing more broadly. The company defines its Transparency Policy as 'providing all the requisite information for all stakeholders to be able to make timely and fully informed decisions about Pella and its funds' financial and responsible investing decisions and outcomes'.

Application of Policy

Pella divides its transparency policy into the three Ps: (i) Policies; (ii) Portfolio; (iii) Practices. These data are made available in the following places:

- 1. Pella website access to Pella's various policies, monthly fund reports, opinion pieces, and the annual Responsible Investment Report.
- 2. Monthly fund reports provides key investment and ESG data for the fund.
- 3. Quarterly report provides the same data as the monthly reports and adds the full portfolio, with a one quarter lag.
- 4. Annual Responsible Investment Report provides in-depth data and discussion about Pella's Responsible Investing activities, including: voting, reasoning behind key votes, Annual Key Initiative development, number of company interactions.

Policies

The policies provide guidance of Pella's approach to key Responsible Investing considerations and should always be available to Pella's stakeholders. Pella makes its RI policies publicly available and easily accessible on its website.

Portfolio

Portfolio data is made available in Pella's funds' monthly and quarterly reports. The monthly reports disclose the fund's top ten holdings and key fund aggregate exposures including sector, market cap, geography, carbon intensity, and MSCI ESG rating. The quarterly report provides similar data to the monthly with the exception that the quarterly discloses the full portfolio holdings, with a quarterly lag. The quarterly report also includes additional ESG related data such as the number of severe controversies per company, whether the company is a signatory to the UNGC, and several other Responsible Investing data deemed most relevant by Pella.

Practices

Practices relate to Pella's corporate engagement. Pella's policy is to disclose its corporate engagement, including how Pella voted and, when Pella votes against Director recommendations, why it did so, and explanations of Pella's response to severe controversies.

APPENDIX

Definitions of Sustainable/Responsible Investment

Table 13 - Comparison of the Types of Sustainable/Responsible Investment

| Eurosif | GSIA/RIAA/Evergreen- equivalent | PRI-Equivalent | EFAMA-equivalent |
|--|--|---|--|
| ESG integration | ESG integration | Integration of ESG issues | |
| Exclusion of holdings from investment universe | Negative/exclusionary screening | Negative/exclusionary screening | Negative screening or exclusion |
| Norms-based screening | Norms-based screening | Norms-based screening | Norms based approach (type of screening) |
| Engagement & voting on sustainability matters | Corporate engagement & shareholder action | Active ownership & engagement. Three types: engagement, voting, shareholder resolutions | Engagement (voting) |
| Best-in-class investment selection | Positive/best-in-class screening | Positive/best-in-class screening | Best-in-class policy (type of screening) |
| Sustainability themed investment | Sustainability themed investment | Sustainability themed investment | Thematic investment (type of screening) |

Table 14 - Description of types of Responsible Investing

| Strategy | Definition | | |
|-----------------------|--|--|--|
| ESG Integration | Explicitly include ESG risks and opportunities into analysis and investment decisions based on a systematic process and appropriate research sources (RIAA) Systematic and explicit consideration of ESG factors into financial analysis (GSIA) Apply ESG risks and opportunities to financial analysis and investment decisions (Evergreen) | | |
| Negative screening | Exclusions based on activities considered not investable due to misaligned values or downside risk (RIAA) (Evergreen) Exclusion of certain sectors, companies or practices based on specific ESG criteria (GSIA) | | |
| Norms-based screening | Exclude companies that do not meet minimum standards of business practices based on international norms and conventions (RIAA) (Evergreen) | | |

| | • Screening of investments based on compliance with international norms and standards such as those issues by the OECD, ILO, UN, UNICEF. May exclude investments not in compliance or underweighting these investments (GSIA) |
|----------------------------------|--|
| Corporate engagement | Executing shareholder rights and fulfilling fiduciary duties to signal desired corporate behaviours guided by ESG considerations (RIAA) Use shareholder rights and fiduciary duties to guide a company using ESG guidelines. (Evergreen) Employ shareholder power to influence corporate behaviour through direct corporate engagement (communicate with senior management), filing shareholder proposals, and proxy voting that is guided by comprehensive ESG guidelines. (GSIA) |
| Positive/best in class screen | Intentionally tilting a portion of a portfolio towards solutions or companies or industries assessed to have better ESG performance relative to benchmarks or peers (RIAA) Realign portfolio to specifically target better ESG profiles either at the company level of industries (Evergreen) Invest in companies selected from a defined universe for positive ESG performance relative to industry peers (GSIA) |
| Sustainability-themed | Specifically targeting investment themes e.g. sustainable agriculture, green property, low carbon, SDG-alignment (RIAA) (Evergreen) Investment in themes that address specific sustainability issues such as climate change, food, water, renewable energy, clean energy. (GSIA) |
| Impact | Invest to achieve positive social and environmental impacts – requires measuring and reporting against these. (RIAA) |

Controversies & Norms Based Analysis

Pella's Position

- In assessing breaches, Pella treats complicity as seriously as the actual abuse, with complicity generally composed of two elements
 - Act or omission that helps another carry out a human rights abuse
 - Knowledge that its act or omission could provide such help
- Pella primarily complies with the UN Global Compact (UNGC) and, secondly, with the OECD Guidelines for the following reasons
- According to Pella's interpretation of the OECD Guidelines, the key determinant of when to exit a position that is complicit in a breach (even if it is complying with local laws) is how crucial that investment is to us:
 - Based on the OECD Guidelines it is feasible for companies complicit in human rights abuses to continue the said operations that are in breach with international norms

when they are complying with local laws and the relationship with the local government is crucial.

- However, it is not permissible for us to maintain our investment in the said company because it is not crucial to us.
- Pella consider the most severe breaches as: Forced labour/slavery; Child labour; Genocide or ethnocide.

Summary of key protocols/guidelines/policies

The purpose of this paper is to provide background knowledge to help guide our approach to managing controversies and norms-based screening. Controversies are essentially a sub-unit of norms-based screening, meaning in this paper Pella use the term norms-based screening as the collective word. Managing norms-based issues is critical because these issues are not black and white and cannot be automated, meaning it is the area that allows active managers to provide the greatest value-add.

The Evergreen RFI points to several protocols/guidelines/policies/principals ("Policies"), listed in Table 15, as potential sources for Norms-Based screening. This paper provides an overview of most of these policies. It excludes SDGs, which are the domain of positive behaviour rather than norms-based breaches. It also doesn't include the Convention on Cluster Munitions, Ottawa Convention on Landmines, Treaty on the Non-Proliferation of Nuclear Weapons because Pella avoids all weapons meaning we already have processes in place to deal with situations where those Policies are relevant – we exit the position. Pella also does not focus overtly on the UNPRI as it is a policy document for our behaviour, rather than providing principles for norms-based issues.

The Policies are not alike. Some of them focus on national States rather than businesses and investment. Several of them provide the input to be used elsewhere, for example the OECD Guidelines for Multinational Enterprises (OECD Guidelines) and UN Global Compact (UNGC) do not provide a list of human rights and rather point to the International Bill of Human Rights and ILO Fundamental Conventions as the competent source of human rights. The Policies that are most relevant for institutional investors' norms-based issues are the UNGC and the OECD Guidelines.

| Protocol | Depository | Focus |
|--|-------------------------------|-----------------|
| Global Compact (UNGC) | United Nations | Business |
| Guidelines for Multinational Enterprises | OECD | States |
| International Bill of Human Rights | United Nations | States |
| ILOs Fundamental Conventions | United Nations ⁽¹⁾ | Business/States |
| Conventions on the Rights of the Child (UNCRC) | United Nations | States |
| Convention Against Corruption (UNCAC) | United Nations | States |
| Guiding Principles on Business and Human Rights (UNGPs) | United Nations | Businesses |
| Framework Convention on Climate Change (UNFCCC) | United Nations | States |

Table 15 - List of relevant Policies

|---|------------------------|-----------------|
| activities | | |
| Principles for Responsible Investing (UNPRI) | United Nations | Business |
| Sustainable Development Goals (SDGs) | United Nations | Business/States |
| Convention on Cluster Munitions | United Nations | States |
| Ottawa Convention on Landmines | United Nations | States |
| Treaty on the Non-Proliferation of Nuclear United Nations States | | States |
| Weapons | Officed Nations States | |

(1) The International Labour Organization (ILO) is a United Nations agency

Pella consider the OECD Guidelines as the most comprehensive Policy. Table 16 demonstrates that the OECD Guidelines includes the same material as the UNGC plus some additional requirements. Pella also consider the OECD guidance provides more practical advice, such as explicit recognition that a business must comply with local rules. However, the UNGC is the most widely followed and accepted behavioural template. For that reason, Pella will primarily comply with the UNGC but will also strive to comply with the OECD Guidelines.

| UNGC | OECD Guidelines | Supporting material |

The Policies

UN Global Compact

The UNGC is a non-binding pact to encourage businesses to adopt sustainable and socially responsible policies, and to report on their implementation. It has two objectives

1. Mainstream ten principles for sustainable and socially responsible business practices.

2. Catalyse actions in support of broader UN goals, such as Sustainable Development Goals (SDGs).

The Ten Principles

The UNGC's 10 principles cover four areas (Table 17) with each area deriving their principles from other UN documents, namely: UN Declaration of Human Rights; ILO's Declaration on Fundamental Principles and Rights at Work; RIO Declaration on Environment and Development; UN Convention Against Corruption.

| Area | a Principles | | |
|---|---|--|--|
| Human Rights | <u>Principle 1</u>: Businesses should support and respect the protection of internationally proclaimed human rights; and <u>Principle 2</u>: make sure that they are not complicit in human rights abuses. | | |
| Labour | <u>Principle 3</u>: Businesses should uphold the freedom of association and the effective recognition of the right to collective bargaining; <u>Principle 4</u>: the elimination of all forms of forced and compulsory labour; <u>Principle 5</u>: the effective abolition of child labour; and <u>Principle 6</u>: the elimination of discrimination in respect of employment and occupation. | | |
| Principle 7: Businesses should support a precautiona to environmental challenges; Principle 8: undertake initiatives to promote greater environmental responsibility; and Principle 9: encourage the development and diffusion environmentally friendly technologies. | | | |
| Anti-Corruption | <u>Principle 10</u> : Businesses should work against corruption in all its forms, including extortion and bribery. | | |

Source - UN Global Compact, <u>https://www.unglobalcompact.org/what-is-gc/mission/principles</u>

Table 18 provides an overview of each principle.

| Table 18 | Overview | of the ten | principles |
|----------|----------|------------|------------|
|----------|----------|------------|------------|

| Principles | Discussion | |
|---|---|--|
| (1) Support and protect human rights | Requires: (i) human rights policy commitment; (ii) due diligence to avoid infringing human rights; (iii) take actions to address adverse human rights impacts with which they are involved; (iv) take voluntary action to make positive contribution towards the protection and fulfillment of human rights, e.g. via philanthropy Due diligence includes: Assessing human rights impacts | |

| | Integrating human rights policies throughout a company | |
|---|---|--|
| | Take action | |
| | Track performance | |
| | Communicate performance | |
| | Complicity is generally made up of two elements | |
| | Act or omission that helps another carry out a human rights abuse | |
| | Knowledge that its act or omission could provide such help | |
| | Contexts of complicity | |
| | Direct complicity – the company provides goods | |
| (2) Do not be complicit in human rights abuses. | or services that it knows will be used to carry out | |
| | the abuse | |
| | Beneficial complicity – company benefits from | |
| | human rights abuses even if it did not positively | |
| | assist or cause them | |
| | Silent complicity – company is silent or inactive in the face of systematic or continuous hymen | |
| | the face of systematic or continuous human | |
| (2) 11 1 1 (| rights abuse | |
| (3) Uphold freedom of | | |
| association & rights to collective bargaining | Self-explanatory | |
| | Forced labour is generally characterized by | |
| | Lack of consent to work | |
| (4) Elimination of forced and | Menace of penalty | |
| compulsory labour | Providing wages or other compensation does not | |
| | necessarily indicate that the labour is not forced or | |
| | compulsory | |
| (5) Abolition of child labour | Self-explanatory | |
| (6) Elimination of discrimination at work | Self-explanatory | |
| | This principle focuses on prevention rather than | |
| (7) Support a precautionary | remediation | |
| approach to the | Risk should be considered relative to the environment, | |
| environment | Risk should be considered relative to the environment, health, and safety. | |
| (8) Promote greater | | |
| environmental | • This principle encourages businesses to take steps | |
| | minimise their negative environmental impacts. | |
| responsibility | Encourage the use of environmentally served | |
| (9) encourage development | Encourage the use of environmentally sound | |
| and diffusion of | technologies that: | |
| environmentally friendly | Protect the environment | |
| technologies | • Are less polluting | |
| - | Use resources in a more sustainable manner | |

| | Recycle more of their wastes and products Handle residual wastes in a more acceptable manner |
|---|---|
| (10) Work against corruption in all its forms | Participants must do more than just avoid bribery, extortion and other forms of corruption, but also proactively develop policies and programmes to address corruption internally and within their supply chains. Corruption doesn't only have to be financial |

Situations of Conflicting Legal Requirements

Table 19 and Table 20 the UNGC's guidance ³ on how businesses could respond when local laws conflict with internationally recognised human. I consider this guidance of minimal practical use because it targets situations corporations might encounter but rarely get reported to investors and requires the company to have some leverage over the government, which is not the case in most regions we invest in, particularly China.

| Table 19 -Identify and clarify the scope o | f a potential conflict |
|--|------------------------|
| | |

| Step | Heading | Discussion |
|------|---|---|
| 1 | Define & embed the commitment to meet the responsibility to respect human rights into the business enterprise's legal and ethical policies | Businesses should have a human rights policy or statement of commitment, which is only included in a corporate code of conduct |
| 2 | Undertake human rights due diligence | Identify, prevent, mitigate and account for how the enterprise will respond to situations where national laws may conflict with internationally recognized human rights. Business should have a protocol for how to address human rights conflicts |
| 3 | Clarify the scope of a potential conflict | Essentially means understand the local law and how it conflicts with internationally recognized human rights |

Source - UNGC, Meeting the Responsibility to Respect in Situations of Conflicting Legal Requirements, 13 June 2011

Table 20 - Steps to take when a conflict exists

| Step | Heading | Discussion |
|------|-----------------------------|--|
| 1 | Lobby national government | |
| 2 | Employ contractual remedies | Get items written in contracts that require compliance with international human rights |

³ UNGC, Meeting the Responsibility to Respect in Situations of Conflicting Legal Requirements, 13 June 2011

| | Enlist the support of influential third- | standards or steps a local supplier must take to comply with the standards MNEs can require local business partners to comply with the international human rights requirements Work with other enterprises or through trade associations to express concern about |
|---|--|--|
| 3 | party organizations or individuals | local laws that infringe upon internationally recognized human rights |
| 4 | Enlist the support of officials in the corporation's home country | Transnational businesses may be able to lobby officials in their home country to pressure the host country for change |
| 5 | Use parallel means to honour the principles of internationally recognized human rights | Try to respect the human rights norms to the greatest extent possible while also complying with the local law. Example of parallel means - allowing employees to create employee councils in countries that outlay unions. |
| 6 | Exhaust local judicial and procedural remedies | Exhaust local judicial remedies to challenge the local laws that conflict with internationally recognized human rights Even if you can't change the law, it sends a message to the government. For example, several large global ISPs implement strict policies when handling information from authorities using recommendations of the Global Network Initiative |
| 7 | Implement mechanisms to ensure transparency | For example, Google's Government Requests tool |
| 8 | Push the boundaries of legal compliance: corporate civil disobedience | For example, some companies allow women to remove their head scarves at work or create most female divisions to circumvent the ban on women and men co- mingling |

OECD Guidelines for Multinational Enterprises ("OECD Guidelines")

The OECD Guidelines are non-binding principles for business conduct. It is virtually identical to the UNGC, with the OECD Guidelines being marginally more comprehensive as it includes additional Principals (Consumer Interest, Science and Technology, Competition, Taxation). Pella believe that complying with the OECD Guidelines implies compliance with the UNGC.

| | Discussion |
|---|--|
| Human rights | • Essentially identical to the UNGC's Principles 1 and 2. |
| Employment and industrial relations | • Essentially identical to UNGC's Principles 3, 4, 5, 6 |
| Environment (really dealing with environment, health, safety) | Essentially identical to UNGC's Principles 7, 8, 9 Makes direct reference to a business's supply chain. |
| Combating bribery, bribe solicitation and extortion | • Essentially identical to UNGC Principle 10. |
| Consumer Interests | Act in accordance with fair business, marketing and advertising practices and take all reasonable steps to ensure the quality and reliability of the goods and services. Ensure the goods and services meet all agreed or legally required standards for consumer health and safety, including pertaining to health warnings and safety information Provide accurate, verifiable and clear information that is sufficient to enable consumers to make informed decisions, including information on price, content, safe use, environmental attributes, maintenance storage and disposal Provide consumers with fair and effective non-judicial dispute resolution and redress mechanisms. Do not make deceptive, misleading, fraudulent or unfair representations or omissions Support effort to promote consumer education in areas that relate to business activities with the aim of improving consumers ability to Make informed decisions Better understand the economic, environmental and social impact of their decisions Support sustainable consumption Respect consumer privacy and take reasonable measures to ensure the security of personal data that they collect, store, process of disseminate Take into consideration the needs of vulnerable and disadvantaged consumers |
| Science & Technology | Endeavour to ensure activities are compatible with the science and tech policies and plans for the country and contribute to the development of local and national innovative capacity Adopt where practical practices that permit the transfer and rapid diffusion of technologies and know-how |

Table 21 - OECD Guidelines for MNEs

| • | When appropriate, perform science and technology development work in host countries and employ host country personnel When granting licenses for the use of intellectual property rights, do so on reasonable terms and conditions and in a way that contributes to the long-term sustainable development prospects of the host country Where relevant, develop ties with local universities, public research institutions |
|---------------|--|
| • | Carry out activities in a manner consistent with all applicable competition laws and regulations |
| Competition • | Refrain from entering into anti-competitive agreements |
| | among competitors e.g. fix prices, collusive tenders, establish output restrictions, divide markets |
| | · · · · · · · · · · · · · · · · · · · |
| Taxation | Make timely payment of tax liabilities - complying with the |
| | letter and spirit of the law |

Source - OECD Guidelines for Multinational Enterprises, 2011

The OECD Guidelines also recognises that there are instances when local laws conflict with international accepted human rights. Under the OECD Guidelines "obeying domestic laws is the first obligation of enterprise.....In countries where domestic laws and regulations conflict with the principles and standards of the OECD Guidelines enterprises should seeks wats to honour such principles and standards to the fullest extent which does not place them in violation of domestic law"⁴

The OECD Guidelines require all OECD member and adhering governments to establish a functioning National Contact Point (NCP) to further the observance of the Guidelines. Ostensibly, the NCPs should provide a good source to identify and track businesses' compliance with the Guidelines. However, my tests of the NCP database point to it rarely being used and the MSCI controversies and ESG compliance database appears to be far more comprehensive.

Responsible Business Conduct for Institutional Investors

The OECD Guidelines defines ESG/CRS as Responsible Business Conduct ("RBC") and provides useful guidance for institutional investors. The Guidelines require institutional investors to conduct RBC **due diligence** as part of the investment process and to **apply leverage** to their investments to improve their RBC.

The due diligence requirements are largely self-explanatory, and the only points Pella will include are that we should identify actual and potential impacts within our portfolio and account for how adverse impacts are addressed by tracking and communicating our performance.

The application of leverage involves engagement, directing capital towards responsible companies, involvement in industry initiatives that target RBC risks and collective action on specific issues. We have already committed to the former two requirements. Some avenues for

⁴ OECD Guidelines for Multinational Enterprises, 2011, pg. 17

collaboration are PRI Collaboration Platform, UNEP Finance Directive, investor networks on climate change, Corporate Sustainability Reporting Coalition.

The Guidelines recognise that it might not be practical to implement all the OECD Guideline recommendations at once and a risk-based approach is suitable. This approach involves prioritising the most sever risks and systematically over time expand application of the Guidelines.

The significance or severity of an adverse impact is a function of a breach can be measured using three inputs: scale, scope and irremediable character. **Scale** speaks to the gravity of the adverse impact. **Scope** points to the reach of the impact, for example the number of individuals that are or will be affected or the extent of the environmental damage. **Irremediable character** involves limits on the ability to restore the individuals or environment affected to a situation equivalent to their situation before the adverse impact.

Under OECD Guidelines, divestment should in most cases be a last resort or reserved only for the most severe adverse impacts and after consideration of two key inputs: (i) Leverage; (ii) How crucial the business relationship is. Given our investment process, most of our business relationships are not crucial and we lack real leverage over most of our investments. which implies we should generally exit investments when severe abuses occur.

If we decide to continue to invest in a company that is causing or contributing to adverse impacts, we should report the situation internally, monitor the investment, for example, through a knowledge database, and revisit the decision where circumstances change or as part of the long-term strategy to systematically respond to all recommendations of the OECD Guidelines.

| | Have leverage | Lack leverage |
|-------------|--|--|
| Crucial | Step 1 Mitigate the risk that abuse continues/recurs If unsuccessful go to step 2 | <u>Step 2</u> Seek to increase leverage If unsuccessful, seek to mitigate the risk that abuse continues/recurs If unsuccessful consider ending the relationship or demonstrate efforts made to mitigate abuse, recognising possible consequences of remaining |
| Not crucial | Step 3 Mitigate the risk that abuse continues/recurs If unsuccessful, take steps to end the relationship | <u>Step 4</u> Assess reasonable options for increasing leverage to mitigate the risk that the business continues/recurs If impossible or unsuccessful, take steps to end the relationship |

The International Bill of Human Rights

The International Bill of Human Rights is composed of three mandatory protocols and two optional protocols. These rights form the basis of the human rights components for the human

rights section included in: UN Global Compact; Guiding Principles on Business and Human Rights; Guidelines for Multinational Enterprises. The rights also have cross over with many of the ILO's Fundamental Conventions, for example freedom from slavery, the right to association, and the right to equal pay for each work. Therefore, complying with the other norms necessarily requires complying with the International Bill of Human Rights.

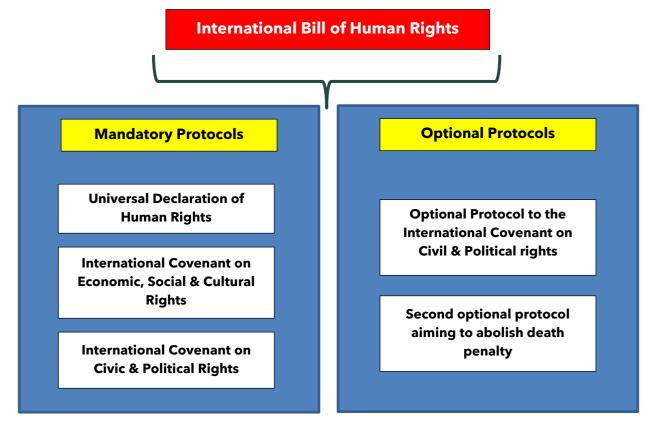

Figure 11 - Components of the International Bill of Human Rights

Source - Pella

The human rights are listed by article, with each article pointing to a human right. The Declaration has 30 articles/human rights (Table 23) and the mandatory Covenants have a combined 27 articles/human rights (Table 24), together pointing to a total of 57 mandatory human rights.

| Articles | Notes |
|----------|---|
| 1 | • Right to liberty and equality and due to humans being rational and moral, we are entitled to certain rights and freedoms which other creatures do not enjoy |
| 2 | • Sets out basic principles of equality and non-discrimination regarding the enjoyment of human rights and fundamental freedoms |
| 3 | • Sets out the first cornerstone to the Declaration The right to life, liberty, and security - introduces articles 4-21 |
| 4-21 | Freedom from slavery and servitude |

Table 23 - UN Declaration of human rights

| • | Freedom from torture and cruel, inhuman or degrading treatment or |
|---|---|
| | punishment |

- Right to recognition as a person before the law •
- Right to an effective judicial remedy
- Freedom from arbitrary arrest, detention or exile
- Right to a fair trial and public hearing from an independent and impartial tribunal
- Right to be presumed innocent until proven guilty •
- Freedom from arbitrary interference with privacy, family, home or correspondence
- Freedom of movement and residence
- The right of asylum •
- Right to a nationality •
- Right to marry and to found a family
- Right to own property •
- Freedom of thought, conscience and religion
- Freedom of opinion and expression
- Right to peaceful assembly and association •

| ٠ | Right to take part in the government of one's country and to equal access |
|---|---|
| | to public service in one's country |

| 22 | ٠ | Second cornerstone of the Declaration - the rights to which everyone is |
|-------|---|---|
| | | entitled as a member of society - covered in articles 23 to 27 |
| 23-27 | • | Right to social security |

- Right to social security •
 - Right to work
 - Right to equal pay for equal work
 - Right to rest and leisure •
 - Right to a standard of living adequate for health and well-being •
 - **Right to education** •
- Right to participate in the cultural life of the community
- 28-30 Sets out that everyone should be able to fully realize their human rights • and stress the duties and responsibilities everyone owes to his community

ILO Fundamental Conventions

The International Labour Organization (ILO) is a UN agency whose mandate is to advance social and economic justice through setting international labour standards. The ILO Fundamental

Conventions deals with working conditions and through this focus it has several crossovers with the International Bill of Human Rights and the UN Convention on the Rights of the Child. For example, the Bill of Human Rights and the Fundamental Conventions both point to workers' rights to freedom of association and forbid forced labour/slavery. Similarly, the Fundamental Conventions and UNCRC point to the children's right to be protected from work that is dangerous or that might hard their health or education.

The ILO Fundamental Conventions is composed of eight fundamental conventions (Table 25) and four priority conventions (Table 26) with each convention composed of several articles. Given our approach to investing the most common controversy we are likely to face in our portfolio relate to workers' free of association and collective bargaining as several US companies have chequered records on those issues (e.g. Amazon, Walmart, Tesla, Dish TV).

| Convention | Notes |
|--|--|
| Freedom of association and protection of the right to organise | Workers and employers have the right to establish and join organisations of their choosing without prior authorisation. Worker and employer organisations have the right to draw up their constitutions & elect their representatives and to formulate their programs. Workers and employer organisations should not be liable to be dissolved or suspected by administrative authority. Works and employer organisations have the right to join federations. |
| Right to organise and collective bargaining | Workers shall have adequate protection against acts of anti-union discrimination in respect of their employment. Cannot hire people on the condition that they shall not join a union or shall relinquish trade union membership. Cannot Dismiss or otherwise prejudice a worker by reason of union membership. |
| Forced labour | Definition of forced or compulsory labour = all work which is extracted under the menace of any penalty and for which the person has not offered himself voluntarily. There are some exemptions to the definition of compulsory labour e.g., work which forms part of the normal civic obligations. |
| Abolition of forced labour | Undertake to supress and not to make use of any form of forced of compulsory labour: |

Table 25 - ILO Fundamental Conventions

| | As a means of political coercion or education or as a punishment for holding or expressed political or ideological views As a method of using labour for economic development As a means of labour discipline As a punishment for having participated in strikes As a means of racial, social, national or religious discrimination. |
|-----------------------------|---|
| Minimum age convention | Pursue a national policy designed to ensure the effective abolition of child labour and to have a minimum age for admission to employment. Minimum ages specified in this convention Completion of compulsory schooling, and in any case, not less than 15-years. However, in an economy where the education facilities are insufficiently developed may, after consultation with employers and workers, initially specify a minimum age of 14 years. Min age for any employment which is likely to jeopardise the health, safety or morals of young person = 18 years, or 16 years following sufficient consultation with organisations of employers and workers. Persons aged 13-15 can do light work is not likely to be harmful to their health, doesn't prejudice school attendance. |
| Worst forms of child labour | Definition of child = persons less than 18 years old. Worst forms of child labour All forms of slavery or similar practices, including trafficking of children, debt bondage, serfdom, forced or compulsory labour including as part of armed forces Use of child for prostitution or porn Use of a child for illicit activities, particularly production and trafficking of drugs Work likely to harm the health, safety or morals of children |
| Equal remuneration | Equal remuneration for men and women workers for work of equal value. |
| Discrimination | Promote and practice equality of opportunity and treatment in respect of employment and occupation with a view to eliminating any discrimination. |

- Definition of discrimination any distinction, exclusion or preference made based on race, colour, sex, religion, political opinion, national extraction, or social origin.
- Employment and occupation include access to vocational training, access to employment and conditions of employment.

Source - ILO, <u>https://www.ilo.org/global/standards/introduction-to-international-labour-standards/conventions-and-</u> recommendations/lang--en/index.htm

| Convention | Discussion | |
|---|---|--|
| Labour inspection | Should maintain a system of labour inspection in industrial workplaces to secure the enforcement of legal provisions relating to Conditions of work Protection of work while engaged in their work - e, g., hours, wages, safety, health and welfare, employment of children, Bring notice to the competent authority of defects or abuses not specifically covered by existing legal provisions | |
| Employment policy | Members shall declare and pursue an active policy designed to promote full, productive and freely chosen employment The policy should aim at ensuring There is work for all who are available for and seeking work Work is as productive as possible Freedom of choice of employment | |
| Labour inspection (agriculture) | | |
| Tripartite consultation / International Labour Standards | | |

UN Convention on the Rights of the Child (UNCRC)

The UNCRC sets out 42 articles that articulate children's rights. Most of these articles target States or individuals rather than private enterprise. Table 27 is outlines the articles that Pella believe are most directly relevant for businesses, although businesses can certainly be implicated in the other articles. The best way Pella can simplify the UNCRC is that whenever children are impacted by a business's products, practices or supply chain we should refer to the UNCRC and in all cases, abuses of the UNCRC are self-explanatory.

| Article | Discussion |
|---------|--|
| 9 | Children should not be separated from their parents unless it is for |
| | their own good |
| 14 | Children have the right to think and believe what they want and to |
| | practice their religion, so long as they are not stopping other |
| | people from enjoying their rights |
| 16 | Children have the right to privacy |
| 17 | Children have the right to reliable information from the media. |
| | Mass media should provide information that children can |
| | understand and should not promote materials that could harm |
| | children |
| 27 | Children have the right to a standard of living that is good enough |
| | to meet their physical and mental needs. The government should |
| | help families who cannot afford to provide this |

United Nations Convention Against Corruption (UNCAC)

The UNCAC is identified in the UNGC as the key underlying legal instrument for this principle 10, Anti-Corruption. This Principle does not define corruption but rather defines specific acts of corruption, Table 28.

| Acts of corruption | Discussion ⁽¹⁾ | |
|--------------------|---|--|
| | Offering, giving, receiving, or soliciting of any item of value | |
| Bribery | (not solely money) to influence the actions of an official, or | |
| | other person, in charge of a public or legal duty | |
| | The fraudulent appropriation to his own use or benefit of | |
| Embezzlement | property or money in trusted to him by another, by a clerk, | |
| Empezziement | agent, trustee, public officer, or other person acting in a | |
| | fiduciary character. | |
| | the act of transferring illegally obtained money through | |
| Laundering | legitimate people or accounts so that its original source | |
| | cannot be traced | |
| | The improper suppression or disguising of a fact, | |
| | circumstance, or qualification which rests within the | |
| | knowledge of one only of the parties to a contract, but | |
| | which ought in fairness and good faith to be communicated | |
| Concealment | to the other, whereby the party so concealing draws the | |
| | other into an engagement which lie would not make but for | |
| | his ignorance of the fact concealed. A neglect to | |
| | communicate that which a party knows, and ought to | |
| | communicate, is called a "concealment. | |

Table 28 - Specific acts of corruption

| Obstruction of justice | interfering with the orderly administration of law and justice, |
|------------------------|---|
| | as by giving false information to or withholding evidence |
| | from a police officer or prosecutor, or by harming or |
| | intimidating a witness or juror. |

UN Guiding Principles on Business and Human Rights (UNGPs)

The UNGOs is an instrument consisting of 31 principles that guide States and businesses how businesses should implement the UN's human rights framework. The underlying human rights applied in the UNGP is, at a minimum, the International Bill of Human Rights and the ILO Fundamental Conventions.

The key take aways of the UNGPs for Pella are:

- 1. The UNGP specifically points to complicity in human rights abuses with businesses potentially being perceived as being "complicit" in the acts of another party where, for example, they are seen to benefit from an abuse committed by that party
- 2. Where the domestic context renders it impossible to meet this responsibility fully, businesses are expected to respect the principles of internationally recognized human rights to the greatest extent possible in the circumstances and to be able to demonstrate their efforts in this regard
- 3. Requirement for our investments to have a human rights policy UNGP specifically references the requirements that businesses have a human rights policy commitment and due diligence process.

| Principle | Commentary |
|---|--|
| (1) Businesses should respect human rights. This means that they should avoid infringing on the human rights of others & should address adverse human rights impacts with which they are involved | Take adequate measures for the prevention, mitigation, and remediation of human rights impacts Do not take actions to undermine States' abilities to meet their own human rights obligations. |
| (2) Responsibility to respect human rights refers to internationally recognized human rights, understood, at a min, as | |

Table 30 - Foundational Principles for Businesses

those expressed in the International Bill of Human Rights and the principles set out in the ILO's Declaration on Fundamental (8) Principles and Rights at Work

- (3) Responsibility to respect human rights requires that businesses
 - Avoid causing or contributing to adverse human rights impacts through their own activities and address such impacts when they occur.

Activities includes actions and omissions

relationships with business partners,

supply chain, other non-State or State

entity directly linked to the business

The means through which a business meets its responsibilities to respect

human rights will be proportional to its

Severity of impacts will be judged by their scale, scope, and irremediable character

size

operations, products, or services

Business relationships include

- Seek to prevent or mitigate adverse human rights impacts that are directly linked to their operations, products, or services by their business relationships, even if they have not contributed to those impacts
- (4) Applies to all enterprises regardless of their size, sector, operational context, ownership, and structure
- (5) To meet their human rights businesses should have in place
 - a. A policy commitment to meet their responsibility to respect human rights
 - Human rights due diligence process to identify, prevent, mitigate and account for how they address their impacts on human rights
 - c. Processes to enable the remediation of any adverse human rights impacts they cause or to which they contribute.

Source - United Nations, Guiding Principles on Business and Human Rights, 2011

| Principle Commentary |
|----------------------|
|----------------------|

| (1) Should express their commitment to meet their responsibility to respect human rights through a statement of policy that a. Is approved at the most senior level of the business b. Is informed by relevant internal and external expertise c. Stipulate the enterprise's human rights expectations of | |
|--|--|
| personnel, business partners and other parties directly linked to its operations d. Is publicly available and communicated internally and externally e. Reflected in operational policies and procedures | |
| (2) Should carry out human rights due diligence, including assessing actual and potential human rights impacts, integrating and acting upon such findings, track responses and communicating how impacts are addresses | Potential impacts should be addressed through prevention and mitigation Actual impacts should be a subject for remediation Businesses may be perceived as being "complicit" in the acts of another party where, for example, they are seen to benefit from an abuse committed by that party |
| (3) Businesses should identify and assess any actual or potential adverse human rights impacts with which they may be involved through their own activities or because of business relationships | Should involve using internal and/or external human rights expertise Involve meaningful consultation with potentially affected groups and other relevant stakeholders |
| (4) Should integrate the findings from their impact assessments across relevant functionals and processes and take appropriate action | Businesses should cease to be involved in human rights abuses and should use their leverage over others to stop the abuses There are situations in which the business lacks the leverage to prevent or mitigate adverse impacts and is unable to increase its leverage. Here the business should consider ending the relationship. Where the relationship is "crucial", the severity of the abuse should be considered |

| (5) | Businesses should track the |
|-----|---|
| | effectiveness of their response to |
| | adverse human rights impacts |
| (6) | Should communicate externally how |
| | they address their human rights impacts |

Source - United Nations, Guiding Principles on Business and Human Rights, 2011

Table 32 - Issues of context

| Principle | Commentary |
|--|---|
| In all contexts a business should Comply with all applicable laws and respect internationally recognized human rights Seek ways to honour the principles of internationally recognized human rights when faced with conflicting requirements Treat the risk of causing or contributing to gross human rights abuses as a legal compliance issue | All businesses have the same responsibility to respect human rights wherever they operate Where the domestic context renders it impossible to meet this responsibility fully, businesses are expected to respect the principles of internationally recognized human rights to the greatest extent possible in the circumstances and to be able to demonstrate their efforts in this regard |
| Should first seek to prevent and mitigate the most severe adverse human rights impact or where delayed response would make them irremediable | |

UN Framework Convention on Climate Change (UNFCCC)

The UNFCCC/Paris Agreement are Stated-focused Policies, and it is not immediately clear to me exactly how they apply to businesses. Pella's current thinking is that it is most applicable to highly GHG intensive businesses, using Scope 1 and Scope 2 emissions. The main GHGs contributing to global warming CO2, methane, black soot, and HFCs. Given CO2 accounts for 2/3 of global warming and is the most widely reported emission, Pella think we should primarily focus on that gas.

Overview of UNFCCC/Paris Agreement

The UNFCCC is the major global environment Policy, which in which the Paris Agreement was negotiated under, which is why the UNFCCC and Paris Agreement are often synonymous with each other.

The UNFCCC is composed of 194 parties which are all States who meet annually with the meetings are called '*Conferences of the Parties*' (COP). The meeting in Paris was the 21st, which is why the Paris Agreement is also called COP21. The imminent meeting in Glasgow is the 26th COP (Paris Agreement was in 2015 and due to Covid the Glasgow meeting was moved to 2021).

UNFCCC was agreed to by virtually country in the 1990s when the members agreed to stabilize GHG concentrations "at a level that would prevent dangerous anthropogenic (human induced)

interference with the climate system". The meeting in Paris is described as special "because, for the first time, a binding agreement brings all nations into a common cause to undertake ambitious efforts to combat climate change and adapt to its effects"⁵. However, the truth is it is not at all binding, and Pella think its main relevance is that it defines how countries will implement their UNFCCC commitments after 2020.

The key outcomes of the Paris Agreement are as follows

(1) Limit global warming below 2°C, and preferably to 1.5°C, compared to pre-industrial levels

- There are (at least) two challenges with this goal -
 - The Paris Agreement does not specify the baseline, industrial level. The IPCC Special Report on Global Warming uses the reference period of 1850-1900 to represent preindustrial temperature
 - No definition of how to measure warming should be over a day, a year, over land or water? Again, the IPCC provides some guidance defining warming as the increase in the 30-year global average combined air temperature over land and water temperature at the ocean surface. The 30-year period accounts for the effect of natural variability, for example in 2015 and 2016 were both affected by strong El Niño event, which amplified the underlying human-caused warming.
- In 2015 (year of the Paris Agreement) global warming reached 0.87°C relative to preindustrial period and the global temperature is currently rising by 0.2°C per decade, implying approximately 0.6°C per thirty-year period⁶. Based on these figures, the world would reach 1.5°C somewhere between 2040 and 2050.

(2) Net-zero global emissions in the second half of the 21st Century, which

(3) Transparency frameworks designed for company reporting

Signatories set out their own pledges for how they intend to address climate change. Unique to each country, these pledges are known as Nationally Determined Contributions (NDCs). NDCs are submitted every five years to the UNFCCC, which implies 2020, 2025, 2030.

In COP26 (occurring in Nov-21, in Glasgow), countries are required to also establish Long-Term Low GHG Emission Development Strategies (LT-LEDS), which are intended to help countries refine their NDCs considering new science.

The current consensus of scientific research is that the current NDCs are insufficient to limit global warming to 1.5°C above pre-industrial levels⁷. This implies that a business's compliance with a host country NDC does not automatically imply compliance with the Paris Agreement.

Along with the NDC's, the Paris Agreement established the Enhanced Transparency Framework (ETF), which is used to assess whether countries are meeting their goals and whether the collective efforts are on track to meet the overarching goals. Under ETF, starting in 2024,

⁵ <u>UNFCCC, The Paris Agreement</u>

⁶ IPCC, Frequently Asked Questions, page 7

⁷ IPCC, Frequently Asked Questions, page 9

countries will report on actions taken and progress in climate change mitigation. The information gathered through the ETF will feed into the Global Stocktake, which will assess the collective progress towards the long-term climate goals

Business compliance with the UNFCCC/Paris Agreement

Pella focuses on the major source of GHG, namely CO2, and the largest emitters of CO2, which are listed in Table 33. Using these data Pella focuses on the Paris Agreement's goal of carbon neutrality by the second half of the 21st Century and with this goal, we apply the IEA's requirements for its Net Zero Emissions ("NZE") by 2050 scenario.

Table 33 summarises the key CO2 intensity figures for the most polluting sectors as of 2020, which we can use as a proxy for current carbon intensities. The IEA should provide updated figures annually which we can use to measure compliance with the goals of the UNFCCC/Paris Agreement.

Table 33 - Selected indicators in the IEA's Net Zero Emissions by 2050 Scenario

| CO2 contrib ⁽¹⁾ | 2020 | 2030 | 2040 | 2050 |
|----------------------------|------------------|---|---|--|
| 40% | 459 | 138 | -1 | -5 |

Addendum

Table 34 - State Foundational Principles - from the UNGPs

| Principles | Commentary | |
|---|--|--|
| Statements must protect against human rights abuse within their territory by third parties, including business enterprises Includes taking steps to prevent, investigate, punish and redress such abuse | • States are not responsible for human rights abuse by private actors; however they may breach their obligations where such abuse can be attributed to them or where they fail to take appropriate steps to prevent, investigate, punish and redress private actors' abuse | |
| States should set the expectation that all businesses domiciled in their territory or jurisdiction respect human rights throughout their operations | Recommended that States take steps to prevent abuse abroad by businesses within their jurisdictions | |

Positive Impact Themes

Table 35 - Pella's positive impact themes and SDG targets that relate to these themes

| Themes | Related SDG Targets |
|----------------|---|
| Cleaner Energy | SDG 7.2 - increase share of renewable energy. |
| | • SDG 7.3 - double global rate of improvement in energy efficiency. |

| Conservation | SDG 3.9 - reduce number of deaths from hazardous chemicals and air, water and soil pollution. SDG 6.4 - increase water efficiency. SDG 7.3 - double global rate of improvement in energy efficiency. SDG 8.4 - improve global resource efficiency in consumption and production. SDG 15.2 - ensure the conservation, restoration and sustainable use of ecosystems. SDG 15.b - encourage conservation of forests. SDG 11.6 - reduce adverse environmental impact of cities including air quality and waste management. |
|------------------------|---|
| Improved Health | SDG 3.3 - end communicable diseases. SDG 3.4- reduce premature mortality from non-communicable diseases and promote mental health & well-being. SDG 3.8 - achieve universal health coverage. |
| Safety | SDG 3.6 - halve number of deaths and injuries from road traffic. SDG 3.9 - reduce number of deaths from hazardous chemicals and air, water and soil pollution. SDG 6.1 - universal and equitable access to safe and affordable drinking water. SDG 13.1 -strengthen resilience and adaptive capacity to climate-related hazards and natural disasters. |
| Inclusiveness | SDG 4.3 - equal access for women and men to education. SDG 4.4 - increase the number of youth and adults with relevant skills. SDG 5.5 - women's full and effective participation and equal opportunities for leadership. SDG 8.5 - full and productive employment and decent work for all women and men, including young people and persons with disabilities. SDG 8.6 - reduce the proportion of youth not in employment, education or training. |
| Economic Participation | SDG 2.4 - sustainable food production systems and resilient agricultural practices. SDG 2.c - ensure proper functioning of food commodity markets and their derivatives. SDG 6.1 - universal and equitable access to safe and affordable drinking water. SDG 7.1 - universal access to affordable, reliable and modern energy services. SDG 7.b - expand infrastructure in developing countries SDG 8.1 - sustain per capital economic growth, particularly in the least developed countries SDG 8.10 - encourage and expand access to banking, insurance and financial services for all. |

- SDG 9c increase access to information and communications technology and strive to provide universal and affordable access to the Internet in least developed countries.
- SDG 17.3 mobilize additional financial resources for developing countries.
